

# ANIL PANDIYA

Senior Software Engineer

+91-9672598162 | [anilpandiya05@gmail.com](mailto:anilpandiya05@gmail.com) | LinkedIn: [anilpandiya](#)

## SUMMARY

Experienced UI Architect with 8+ years in building high-performance web and mobile apps across FinTech, enterprise, and AI-driven platforms. Expert in React, micro-frontends, and scalable UI systems. Led frontend architecture, modernised legacy apps, and contributed to AI agent environments like RLgym by designing agent workflows. Known for adopting emerging technologies and driving frontend excellence across cross-functional teams.

## SKILLS

- |                   |              |           |                           |
|-------------------|--------------|-----------|---------------------------|
| • React           | • JavaScript | • Node JS | • RTL, Jest, Enzyme       |
| • React Native    | • TypeScript | • Express | • Redux, Redux-saga       |
| • Next JS         | • Rest APIs  | • Mongo   | • RxJS, Axios, Lodash     |
| • Angular         | • Websocket  | • GraphQL | • Webpack, Rspack         |
| • Micro-Frontends | • OpenAI Gym | • Python  | • AWS services, Team city |

## WORK EXPERIENCE

### Associate

Jun 2020 – Present

BlackRock, Bangalore

### Preqin Pro & Cura

**Tech stack:** React, TypeScript, Micro-Frontends, Redux, Redux-Saga, RxJS, REST APIs, MongoDB, Webpack, Rspack, NPM, Material UI, SASS, Node.js, GitLab CI/CD, TeamCity, AWS (IAM, S3), RTL, Jest, Bitbucket

- Built and scaled FinTech platforms – Preqin Pro and Preqin Cura –used by financial professionals for alternative asset intelligence and ESG insights.
- Developed complex frontend modules in Preqin Pro using the React ecosystem, integrating with RESTful APIs to interface with a MongoDB backend.
- Contributed to Preqin Cura, architected with Micro-Frontend Architecture to support modular development and independent deployment pipelines.
- Designed and delivered reusable ESG (Environmental, Social, and Governance) components across both platforms, enhancing data reporting and compliance visibility.
- Built and maintained a custom UI component library, published as an internal NPM package, improving UI consistency and reusability across teams.
- Managed state orchestration using Redux, Redux-Saga, and RxJS to handle dynamic financial datasets and interactive dashboards.
- Played a key role in the CI/CD pipeline and release management using GitLab, TeamCity, and AWS, ensuring stable and efficient deployments.
- Contributed to frontend test using React Testing Library (RTL) and Jest, maintaining high code quality and test coverage.

## **AI Agent Training – RLgym** (POC for Anthropic)

**Tech stack:** Next.js (App Router), TypeScript, Tailwind CSS, Node.js, REST APIs, Vercel, RLgym, OpenAI Gym (conceptual integration), Simulation APIs, Playwright

- Led the end-to-end development team of a full-stack Doordash-style food delivery simulation platform, designed to model real-world logistics scenarios for training and evaluating AI agents at Anthropic.
- Architected the platform using Next.js App Router with responsive UIs tailored to both customer and delivery agent personas, styled using Tailwind CSS.
- Built core features such as role-based access, dynamic routing, and mock delivery workflows (order placement, pickup, drop-off) to mimic real-time, human-like interactions.
- Integrated AI simulation endpoints compatible with RLgym and OpenAI Gym-style environments, enabling agents to observe, act, and learn from the evolving app state in a controlled setting.
- Deployed on Vercel with iterative testing and performance tuning to support rapid feedback cycles.
- Collaborated with Anthropic's research team to align the platform with multi-agent coordination, autonomous planning, and reward-based decision systems.
- Delivered a high-fidelity POC that successfully enabled AI agent training in a realistic, human-facing environment—contributing to research on real-world behavior modeling and human-AI interactions.

## **Senior Member Of Technical Staff**

Apr 2019 – Jun 2020

iBASEt, California (Remote)

**Tech stack:** React, Angular, TypeScript, JavaScript, Ionic, NPM, Android, iOS

- Developed and published reusable UI components using React and Angular, packaged as internal NPM modules for consistency across product modules.
- Built a native mobile app (Unit Info) using Ionic for Android and iOS, enabling real-time access to production unit data on the shop floor.
- Contributed to post-production efforts including defect resolution, performance tuning, and framework upgrades for long-term system stability.
- Collaborated with cross-functional teams to support Solumina's deployment at aerospace clients like Lockheed Martin and Airbus.

## **Software Engineer**

Jul 2017 – Apr 2019

Capgemini, Bangalore

**Tech stack:** Angular 6, TypeScript, REST APIs, Oracle DB

- Developed and maintained a modular web application using Angular 6, integrating with REST APIs to access and manage data from an Oracle database.
- Delivered multiple change requests (CRs) tailored to region-specific requirements, ensuring localized functionality and compliance.
- Designed and implemented new features and UI enhancements, contributing to improved user experience across modules.

## **Intern**

May 2016 – Jun 2017

IBM, Jaipur

**Tech stack:** JavaScript, Oracle DB, Documentation (MD50)

- Contributed to enhancements of an existing Security Management System, focusing on feature updates and system improvements.
- Prepared MD50 functional specification documents and supported knowledge management for internal process documentation.

## **EDUCATION**

Aug 2013 – May 2017

---

### **Bachelor of Technology – Computer Science & Engineering**

Rajasthan Technical University, Rajasthan, India
